Below is a comprehensive syllabus for a Node.js course:

Course Title: Node.js Development

Course Description: This course provides an in-depth understanding of Node.js for building scalable and efficient server-side applications. Students will learn the fundamentals of Node.js, including asynchronous programming, event-driven architecture, and the Node.js runtime environment. The course covers topics such as building RESTful APIs, working with databases, authentication and authorization, and deployment strategies.

Prerequisites: Basic understanding of JavaScript programming language and web development concepts. Familiarity with HTML, CSS, and JavaScript is recommended.

Course Objectives:

1. Understand the fundamentals of Node.js and its asynchronous, event-driven architecture.
2. Learn how to build server-side applications and RESTful APIs using Node.js and Express.js framework.
3. Gain proficiency in working with databases (MongoDB or SQL) in Node.js applications.
4. Develop skills in implementing authentication and authorization mechanisms in Node.js applications.
5. Explore advanced topics such as error handling, security best practices, and deployment strategies for Node.js applications.

Course Outline:

Module 1: Introduction to Node.js

- Overview of Node.js and its features
- Setting up Node.js environment
- Understanding asynchronous programming with callbacks

Module 2: Node.js Core Modules

- Working with built-in Node.js modules (fs, http, path, etc.)
- Handling file I/O operations
- Creating HTTP servers with Node.js

Module 3: Introduction to Express.js

- Overview of Express.js framework
- Setting up Express.js application
- Routing and middleware in Express.js

Module 4: Building RESTful APIs with Express.js

- Designing RESTful endpoints
- Handling HTTP requests and responses
- Implementing CRUD operations with Express.js routes

Module 5: Middleware and Error Handling

- Implementing custom middleware in Express.js
- Handling errors and exceptions in Express.js applications
- Implementing logging and debugging strategies

Module 6: Working with Databases

- Introduction to databases in Node.js applications
- Connecting Node.js applications to MongoDB or SQL databases
- Performing CRUD operations using database drivers or ORMs

Module 7: Authentication and Authorization

- Implementing user authentication with Passport.js
- Configuring JWT (JSON Web Tokens) for authentication
- Implementing role-based access control (RBAC)

Module 8: Security Best Practices

- Understanding common security vulnerabilities in Node.js applications
- Implementing security best practices (input validation, sanitization, etc.)
- Securing Express.js applications with Helmet.js

Module 9: Testing Node.js Applications

- Introduction to testing frameworks (Mocha, Chai, Jest)
- Writing unit tests and integration tests for Node.js applications
- Mocking external dependencies for testing purposes

Module 10: Deployment Strategies

- Deployment options for Node.js applications

- Hosting Node.js applications on platforms like Heroku, AWS, or Azure
- Continuous Integration and Continuous Deployment (CI/CD) pipelines

Module 11: Real-world Projects and Case Studies

- Working on real-world projects and case studies
- Designing and implementing end-to-end Node.js applications
- Presenting findings and insights from projects

Module 12: Capstone Project

- Developing a comprehensive Node.js project
- Identifying a business problem or scenario
- Designing and implementing a solution using skills learned throughout the course

Assessment:

- Weekly assignments to reinforce learning concepts.
- Midterm project: Developing a basic Node.js application with RESTful API endpoints and database integration.
- Final project: Designing and implementing a comprehensive Node.js application addressing a real-world scenario.

Textbook: "Node.js Design Patterns" by Mario Casciaro

Additional Resources:

- Online tutorials and documentation (Node.js official documentation, Express.js documentation, etc.).
- Supplemental readings and materials provided by the instructor.

Grading:

- Assignments: 30%
- Midterm Project: 20%
- Final Project: 40%
- Participation and Attendance: 10%

Attendance Policy: Regular attendance is expected. Students are allowed a maximum of three unexcused absences. Excessive absences may result in a reduction of the final grade.

Office Hours: Instructor office hours will be held twice a week for additional help and clarification.
